Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Response to Arguments

In view of the Declaration under 37 CFR §1.131 filed on February 25, 2004,
PROSECUTION IS HEREBY REOPENED. A new non-final action has been set forth below.

To avoid abandonment of the application, appellant must exercise the following: (1) file a reply under 37 CFR 1.111.

Applicant's arguments with respect to claims 1 and 2 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Sethuram et al. (US 5,828,903).

Sethuram shows a system for transferring data between a network and host coupled to the network using a host adapter. The adapter is situated between the network and host system, wherein the adapter has a DMA engine and local memory. Sethuram shows:

transmitting incoming message from first data processing system (100-103) to a temporary memory (fig. 2b, 204) in an adapter, which is connected to said second data processing (host device) system (col. 4 lines 1-11).

transferring, from said adapter to said second data processing system, an indication that said temporary memory in said adapter contains the message received from said first data processing system (col. 9 lines 21-23).

transferring, from said second data processing system to said adapter, real address information indicating desired target memory locations for said message (col. 4 lines 33-44, line 57- col. 5 line 1).

transferring said message, from said temporary memory in said adapter, directly into said target memory locations in the memory of said second data processing system, said transfer occurring via direct memory access (col. 6 line 22-30 and 44-46).

transferring, from said adapter to said second data processing system, an indication that said target locations now contain the message received from said first data processing system (col. 6 line 54-56).

transmitting an acknowledgement of receipt of said message from said second data processing system to said first data processing system (col. 6 lines 47-50, col. 13 lines 53-55).

In referring to claim 2, Sethuram further discloses the step of advancing indicators in said first data processing system in preparation of transmitting another message, whereby a number of messages may be sent in rapid sequence
